

# Using Cloth Face Coverings to Help Slow the Spread of COVID-19

If you need to leave your home, wear a cloth face covering.

The NH Department of Health and Human Services recommends all Granite Staters wear cloth face coverings when outside of the home to help slow the spread of COVID-19. This advice is based on new data about how COVID-19 can spread before a person has any symptoms. A mask helps protect others around you if you are infected and don't know it.

A cloth face covering is one more precaution we can take to help slow the spread of COVID-19 – and is not a substitute for physical distancing and other prevention measures. You still need to stay at least 6 feet away from people, even when wearing a face covering.

The cloth face coverings recommended are not surgical masks or N-95 respirators. These types of masks are critical supplies that must be reserved for our health care workers and first responders. Please make your own face coverings with household items (see more on the back).

Examples of when to wear a face covering	Examples of when you don't need to wear a face covering
Trips to the grocery store, pharmacy, doctor or hospital	Going for a walk in the woods or in your neighborhood. But bring one in case you encounter other people and stop to chat
Essential workers at a grocery store, pharmacy, or other business setting where they cannot maintain at least 6 feet distance between themselves and others	At home, if everyone in the home isn't showing symptoms
At home if you are sick and have other people in the house	Going for a run on the bike path, if it's not too crowded
Home care workers caring for vulnerable populations	Who should never wear a mask: <ul style="list-style-type: none"> <li>• children under the age of 2</li> <li>• anyone who has trouble breathing, or is unconscious</li> <li>• anyone who is unable to remove the mask without assistance</li> </ul>
Riding the bus, taxi, or ride share	
Walking on a busy and crowded street	

## What is a cloth face covering?

A cloth face covering is any well-secured cloth (like a bandana, scarf, or homemade mask) that covers your mouth and nose. It does not adequately protect the wearer and is not a substitute for social distancing, but can protect others in case the wearer is infected with COVID-19 and has not started showing symptoms. Cloth face coverings are recommended to help preserve Personal Protective Equipment for frontline healthcare workers. For more information about how to wear and make cloth face coverings, see the [CDC website](#)

## Why are you recommending this now?

There is a lot we are still learning about COVID-19. However, there is more evidence that people without symptoms may be able to spread the virus, and that droplets produced when breathing, speaking, or clearing your throat may spread COVID-19 from person-to-person. We continue to think staying home and practicing physical distancing and good hand hygiene are the most important ways to stop the spread of COVID-19. By recommending that Granite Staters use a face covering, we are adding one more action to help reduce the spread.

## How to wear a cloth face covering:

Cloth face coverings should —

- fit snugly but comfortably against the side of the face.
- be secured with ties or ear loops.
- include multiple layers of fabric.
- allow for breathing without restriction.
- be able to be laundered and machine dried without damage or change to shape.

## Clean cloth face coverings daily, by hand or machine, using detergent.

A washing machine should suffice to properly wash a cloth face covering. Make sure it's completely dry before using. You should have a few on hand so you can rotate for washing.

## Remove and store it properly and safely.

- Do not touch your eyes, nose and mouth when removing it.
- Immediately wash your hands after removing it.
- Don't put it where others can touch it or on counter tops or tables.
- To temporarily store a mask between uses, place in a clean, sealable paper bag or breathable container.

## Make your own.

CDC has [instructions on making your own coverings](#) in several different methods, including machine or hand-sewn, a no-sew method with a t-shirt and scissors, and a no-sew method with a bandana.
